#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5-9, 11-12 and 36 are rejected under 35 U.S.C. 102(b) as being anticipated by Fischer (US 4,143,297).

Fischer discloses (fig 11-14) a display device with a display region having a selfemissive element formed between a pair of substrates with a resin having a desiccant mixed therein is disposed between the substrates.

Regarding claim 2, Fischer discloses the substrates are adhered to one another by a sealing material disposed surrounding at least the display region.

Regarding claim 3, Fischer discloses resin having desiccant mixed therein is used as the sealing material.

Regarding claim 5, Fischer discloses the self-emissive element is an electroluminescence element.

Regarding claim 6, Fischer discloses the display region is formed on a first substrate, a second substrate is arranged facing the display region side and a color component is provided in a gap between the second substrate and the display region, the second substrate being transparent to visible light.

Application/Control Number: 09/656,482

Art Unit: 2879

Regarding claim 7, Fischer discloses the display region is formed on a first substrate and a spacer composed of a desiccant is provided in a gap between the second substrate and the display region.

Regarding claim 8, Fischer discloses the self-emissive element is an organic electroluminescence element containing an organic compound in an emissive element layer.

Regarding claim 9, Fischer discloses the resin is located in a gap between the pair of substrates and covers at least the display region.

Regarding claim 11, Fischer discloses the resin fills the gap between the substrates.

Regarding claim 12, Fischer discloses the desiccant is a substance having a chemically absorptive property.

Regarding claim 36, Fischer discloses a light-emitting device with an emissive region having a self-emissive element formed between a pair of substrates and a resin having a sesiccant mixed therein is disposed between the substrates.

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 4, 10, 13-35 and 37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fischer (US 4,143,297) in view of Ebisawa et al. (US 6,284,342).

Application/Control Number: 09/656,482

Art Unit: 2879

Fischer discloses all of the above claim limitations but fails to clearly point out the resin being cured by ultraviolet irradiation, the particle diameter of the desiccant powder being 20 µm or less, the desiccant is mixed in the resin at a ratio of at least 10 wt%, a grove formed in one of the substrates on a side facing the other substrate.

Regarding claim 14, It would have been obvious to one having ordinary skill in the art at the time the invention was made to select the most appropriate range for the wt% of desiccant, since discovering the optimum or workable ranges involves only routine skill in the art.

Regarding claims 4 and 10, Ebisawa discloses the resin being cured by ultraviolet irradiation in order to avoid softening of the EL structure.

Regarding claim 13, Ebisawa discloses the particle diameter of the desiccant powder being 20 µm or less in order to avoid a drop in water absorption.

Regarding claims 15-35 and 37, Ebisawa discloses a grove formed in one of the substrates on a side facing the other substrate in order to substantially eliminate the influence of moisture and have a long lifetime.

Hence it would have been obvious to one of ordinary skill in the art at the time the invention was made to use the display of Fischer with the resin being cured by ultraviolet irradiation in order to avoid softening of the EL structure, the particle diameter of the desiccant powder being 20 µm or less in order to avoid a drop in water absorption, and a grove formed in one of the substrates on a side facing the other substrate in order to substantially eliminate the influence of moisture and have a long lifetime, as taught by Ebisawa.

### **Contact Information**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ken A Berck whose telephone number is (703)305-7984. The examiner can normally be reached on Mon-Fri 8:30-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nimesh Patel can be reached on (703)305-4794. The fax phone numbers for the organization where this application or proceeding is assigned are (703)308-7382 for regular communications and (703)308-7382 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)308-0956.
